

CIS Research Seminar

Date: Thursday, December 6

Time: 3PM

Location: Wu & Chen

Speaker: Dr. Boon Loo

Title: "Adaptive Information-centric Networking"

Abstract:

I will present an overview of my current research under the general theme of "adaptive information-centric networking". I will first provide background on declarative networking, which is a high-level declarative framework that supports declarative specifications and implementations of network protocols. I will then describe three ongoing research projects: (1) the MOSAIC project on application-aware overlay selection and intelligent composition, (2) provenance-aware declarative secure networks, and (3) adaptive policy-based mobile ad-hoc networks.

All students and faculty are invited & encouraged to attend.

Following talk, refreshments will be served on the Levine mezzanine.
