

**Spring, 2005    CIS 610**

# **Advanced Geometric Methods in Computer Science**

**Jean Gallier**

## **Final Project**

April 13, 2005; Due May 2, 2005

Pick one (or more, if you feel ambitious) of the papers listed in the home page for CIS610 under “Papers and talks suitable for a project” and write a short paper (3 to 5 pages) summarizing in a critical way the main results of the paper(s) you picked. Try as best as you can to assess the originality and the accuracy of the results presented in the chosen paper(s). If possible, make comparison with related work and suggest possible applications, extensions, generalizations.

**TOTAL: 250 points.**
