

## Part II

# Geometric Methods and Applications Additional Topics

# Table of Contents

<b>18 Polynomial Curves</b>	<b>571</b>
18.1 Polar Forms and Control Points . . . . .	571
18.2 The de Casteljau Algorithm . . . . .	574
<b>19 Polynomial Surfaces</b>	<b>577</b>
19.1 Polar Forms . . . . .	577
19.2 Control Points For Triangular Surfaces . . . . .	579
19.3 Control Points For Rectangular Surfaces . . . . .	580
19.4 The de Casteljau Algorithm and Subdivision . . . . .	581
<b>20 More On Embedding an Affine Space in a Vector Space</b>	<b>585</b>
20.1 From Multiaffine Maps to Multilinear Maps . . . . .	585
<b>21 Complements of Projective Geometry</b>	<b>589</b>
21.1 Multiprojective Maps . . . . .	589
21.2 More on Projective Completions and Frames . . . . .	590
21.3 More on Multiprojective maps and Multilinear Maps . . . . .	594
<b>22 Rational Curves</b>	<b>597</b>
22.1 Rational Curves and Multiprojective Maps . . . . .	598
22.2 Rational Curves and Bernstein Polynomials . . . . .	608
22.3 Subdivision Algorithms for Rational Curves . . . . .	611
22.4 Approximating Closed Rational Curves . . . . .	617
22.5 A “Gallery” of Rational Curves . . . . .	630
22.6 Problems . . . . .	637
<b>23 Rational Surfaces</b>	<b>645</b>
23.1 Rational Surfaces and Multiprojective Maps . . . . .	646
23.2 Triangular and Rectangular $BR$ -Surfaces . . . . .	651
23.3 Rational Surfaces and Bernstein Polynomials . . . . .	658
23.4 Subdivision Algorithms for Rational Surfaces . . . . .	661
23.5 Problems . . . . .	666
<b>24 Approximating Closed Rational Surfaces</b>	<b>671</b>
24.1 Partitioning the Parameter Domain . . . . .	671
24.2 Splitting Rectangular Patches Into Four Patches . . . . .	672
24.3 Splitting Triangular Patches Into Six Triangular Patches . . . . .	674
24.4 Splitting Triangular Patches Into Four Triangular Patches . . . . .	687
24.5 Resolving Base Points of Triangular Nets . . . . .	689
24.6 Problems . . . . .	698

24.7	A “Gallery” of Rational Surfaces . . . . .	709
24.8	Rational Spline Surfaces . . . . .	753
<b>25</b>	<b>Isometries of Hermitian Spaces</b>	<b>755</b>
25.1	The Cartan-Dieudonné Theorem, Hermitian Case . . . . .	755
25.2	Affine Isometries (Rigid Motions) . . . . .	762
<b>26</b>	<b>A Glimpse at Hilbert Spaces</b>	<b>765</b>
26.1	The Projection Lemma, Duality . . . . .	765
26.2	Total Orthogonal Families (Hilbert Bases), Fourier Coefficients . . . . .	773
26.3	The Hilbert Space $l^2(K)$ and the Riesz-Fischer Theorem . . . . .	780
26.4	Problems . . . . .	787
<b>27</b>	<b>Appendix 2</b>	<b>789</b>
27.1	Multiaffine Maps . . . . .	789
27.2	Polarizing Polynomials in One or Several Variables . . . . .	795
