LGIC 010 & PHIL 005 Problem Set 7 Spring Term, 2013

Taking the universe of discourse to be the set of positive integers $\{1, 2, ...\}$ and using the triadic predicate letter "P" to express the relation 3 is the product of 1 and 2and the dyadic predicate letter "R" to express the relation 1 is less than 2, express the following statements in quantificational notation. (The boxed numerals indicate the order of argument places to the predicate letters.) You may need to use the symbol for identity in your paraphrases.

1. (20 points) x is divisible by y.

2. (20 points) x = y + 1.

3. (20 points) x is a prime number. (Recall that the primes are $2, 3, 5, 7, 11, \ldots$)

4. (20 points) x is a perfect cube.

5. (20 points) x is a power of two. (Recall that the powers of two are $1, 2, 4, 8, 16, \ldots$)
