

Two-Dimensional Arrays

Two-Dimensional Arrays

- A *one-dimensional array* stores a list of elements
- A *two-dimensional array* can be thought of as a table of elements, with rows and columns

Two-Dimensional Arrays

- In Java, a two-dimensional array is an *array of arrays*

- A two-dimensional array is declared by specifying the size of each dimension separately:

```
int[][] matrix = new int[12][50];
```

Two-Dimensional Arrays

- Declaration:

```
int[][] matrix = new int[12][50];
```

- Referencing a single element:

```
value = matrix[3][6];
```

- The array stored in one row can be specified using one index

Expression	Type	Description
<code>matrix</code>	<code>int[][]</code>	2D array of integers, or array of integer arrays
<code>matrix[5]</code>	<code>int[]</code>	array of integers
<code>matrix[5][12]</code>	<code>int</code>	integer

Looping Through a 2D Array

```
int M = 10, N = 5;  
double[][] a = new double[M][N];  
for (int i = 0; i < M; i++)  
    for (int j = 0; j < N; j++)  
        a[i][j] = 0;
```

```
int M = 10, N = 5;  
double[][] a = new double[M][N];  
for (int i = 0; i < a.length; i++)  
    for (int j = 0; j < a[i].length; j++)  
        a[i][j] = 0;
```

Ragged 2D Arrays

```
int M = 9;  
double[][] a = new double[M] [];  
for (int i = 0; i < M; i++) {  
    a[i] = new double[M-i];  
    for (int j = 0; j < a[i].length; j++)  
        a[i][j] = 0.0;  
}
```

Ragged 2D Arrays

```
int scores[ ][ ] = { { 44, 55, 66, 77 },  
                     { 36 },  
                     { 87, 97 },  
                     { 68, 78, 88 } } ;
```
